

## FOR IMMEDIATE RELEASE

### ReDiscover Shares Progress on New Kansas City Behavioral Health Campus in South Kansas City

*Kansas City, MO* — ReDiscover is proud to share new progress on its Kansas City Behavioral Health Campus in South Kansas City, a transformative project designed to expand access to critical mental health services for the community.

Located at 9550 Blue Ridge Blvd, the previous abandoned Price Chopper is currently undergoing renovation, with newly released interior images highlighting the thoughtful design and intentional spaces that will support individuals in moments of need. Updated plans reveal clearly defined areas for therapy rooms, meeting spaces, and urgent care lobbies for adults and youth designed to create a welcoming and dignified first point of access to care.

The campus will also feature a separate entrance for emergency medical services and law enforcement, allowing for more seamless coordination and a private, respectful transition for individuals being transported for care. This addition reflects strong community feedback and reinforces ReDiscover’s commitment to collaboration with first responders.

Once complete, the campus will provide access to all services currently offered at ReDiscover’s Behavioral Health Urgent Care Clinics, including intensive outpatient programs, as well as same-day referrals and connections to community-based supports. Strategically located along a public bus line, the campus is designed to reduce barriers and improve accessibility for those seeking care.

The need for expanded services continues to grow. In 2025, ReDiscover served 6,651 individuals through its Behavioral Health Urgent Care Clinics and anticipates that number increasing in 2026 and 2027.

“This campus represents more than a building—it’s a commitment to meeting people where they are with compassion, dignity, and the right level of care,” said Jennifer Craig, President and CEO of ReDiscover. “As demand continues to rise, we are building a space that reflects the needs of our community and the voices of those we serve, including our partners in emergency response.”

Construction remains underway, with continued updates to be shared as the project progresses.
